

ONE-BREATH Neck Pillow

User Manual

Front: Light color

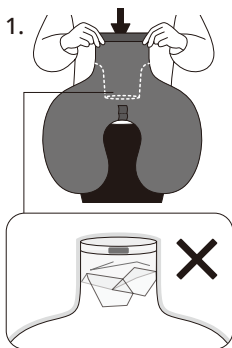

Back: Dark color

Please read the following information before use, and keep for future reference.

Setup

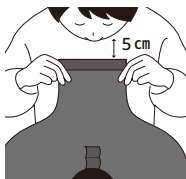

1.

Insert the air valve straight inward.

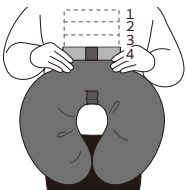

*If the air valve is not straight inside, air will not enter properly.

2.

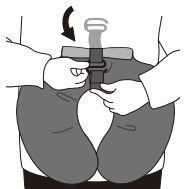

Blow from a distance of approximately 5 cm.
Quickly close the opening to prevent air from escaping.

3.

Fold the opening toward backward at least 4 times.
*Add air if the cushioning is insufficient.

4.

Hook belt loop B after inflating.

Putting Away

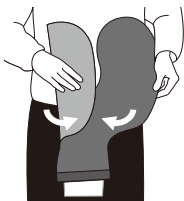

1.

Pull out the air valve from inside and let the air out.

*Do not pull too forcefully.

2.

Fold in the left and right flaps.

3.

Roll up to the opening leaving the valve sticking out.

4.

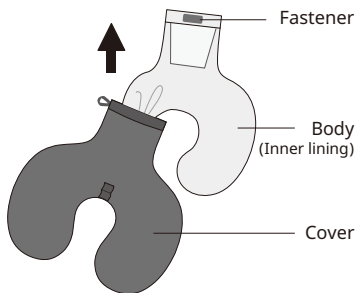

Lastly, pass the hook through belt loop A.

For details see the video.

How to

Product Care

- Make sure to remove the inner lining when washing the cover, and use a laundry net.
- Follow the instructions on the care label when washing the cover.
- If the inner lining is dirty, wipe down with a damp cloth and dry thoroughly.

Attaching the Cover

1. Hold the flaps of the inner lining and insert them into the flaps of the cover one side at a time.
2. Once the inner lining is inside the cover, secure it with the fastener.

Usage Precautions

- Children should not use this product without supervision.
- Due to the nature of this product, air may escape. If this happens, add more air.
- Due to changes in cabin pressure during a flight, the pillow may expand more than usual. If it feels too tight, please release some air to adjust it to your preferred firmness.
- When inflating, air may escape if the opening is not folded sufficiently. Be sure to fold at least four times.
- Do not handle with excessive force or use it as a seat cushion. Avoid bringing the product into contact with sharp objects. Doing so may cause damage or air leakage.
- Color may fade with initial use.
- Do not place next to flame or in high temperature areas.
- Do not use this product outside of its intended purpose.
